## Executive Summary

## Data Sources

This report is based upon data provided by insurers and self-insured hospitals to the Missouri Department of Insurance, Financial Institutions and Professional Registration (DIFP). These data include open and closed claims that insurance companies and self-insured hospitals are required to report under Section 383.105 RSMo. The DIFP makes every possible effort to make sure these data are accurate and complete. However, the accuracy of this report depends largely upon the accuracy of the data filed by insurers and self-insured hospitals.

Additional information is derived from the Missouri "supplement to the annual statement" (see http://insurance.mo.gov/reports/suppdata). These data contain information about market segment, volume of business, market share, losses and expenses.

## Changes to Report

Beginning last year, the format of this report departed substantially from prior reports. The most significant change was that individual claims are no longer reported, but rather counts and other statistics are displayed for claimants and defendants. A comparison of these various methods of aggregation is presented in the following table.

Historically, the DIFP data consisted of one record for each claim. In many instances, a single injury will produce multiple defendants. In addition, a single defendant may have multiple insurance coverages implicated in a single claim (for example, basic and excess policies), and each coverage counted as a single claim. Until recently, all data, such as average awards and the number of claims, were presented solely on a per claim basis, since the data did not possess a unique identifier to link claims associated with a single injury or claimant. Recently, the DIFP developed methods to link associated claims for each defendant and each claimant.

The scenario in the following table illustrates how a single legal action spawns 6 claims, even though there are only three defendants. As aggregation on a per claimant and a per defendant basis is much more meaningful than the traditional per claim aggregation, the latter has been dropped from the report. Individuals interested in the traditional claim counts should contact the department.

| Comparison of Occurrences, Defendants, and Claims |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Claimant | Count | Defendants | Count | Claims | Count |
| An individual brings a claim against a physician, a radiologist, and a hospital, all of whom are alleged to have contributed to a given injury or related injuries | 1 | Physician | 1 | Physician's primary carrier reports a claim | 1 |
|  |  |  |  | Physician's excess carrier reports a claim | 1 |
|  |  | Radiologist | 1 | Original claim against a radiologist is closed due to inactivity | 1 |
|  |  |  |  | The claim against the radiologist is subsequently reopened due to the filing of a lawsuit | 1 |
|  |  | Hospital |  | Hospital reports a claim against its selfinsured funds | 1 |
|  |  |  | 1 | Hospital's excess carrier reports a claim | 1 |
| Total | 1 |  | 3 |  | 6 |

## Highlights

Data for physicians and surgeons, hospitals and other medical care providers are summarized in this report. The category of "other medical care providers" includes, but is not limited to, dentists, nurses, nursing homes, chiropractors, pharmacies, optometrists, podiatrists/chiropodists, clinics, and corporations.

Among the findings of the report are:
■ Profitability Medical professional liability insurers in Missouri returned a profit for a tenth consecutive year, following depressed returns for the period of 1999-2003. Claims incurred plus loss adjustment and administrative costs amounted to 62.8 percent of earned premium in 2013. These costs had exceeded 100 percent of premium during seven of the eight years preceding 2004 (see page 6).

Overall profitability for a line of insurance may be assessed by adjusting Missouri underwriting results to account for expenses and revenues that are not state or line specific, such as investment returns, various unallocated costs, and federal taxes. Estimates produced by DIFP, using the NAIC profitability formula, indicate a profit rate of declined slightly from 25.9 to 19.1 percent of net worth between 2012 and 2013 (pages 6-7).

Incurred claims declined from $\$ 206$ million to $\$ 38.5$ million between 2004 and 2008, but increased somewhat in subsequent years. In 2013, insurers incurred $\$ 41$ million in claims, which amounted to $22.7 \%$ of premium. Defense and adjustment expenses related to settling claims, the largest expense component for medical professional liability insurance aside from claim payments, represent an additional $11.6 \%$ of premium (page 6).

## New Incidents Reported and Closed

After new claims spiked sharply in 2005, newly-opened claims declined substantially in subsequent years. Aside from the anomalous 2005 spike in new claims (a direct result of legal changes implemented in that year), the number of claims reported has declined substantially in recent years, and by 2013 stood at 754 .

■ After a significant increase in 2007, the number of claimants receiving a recovery subsequently declined. The average award per claimant stood at $\$ 275,808$ in 2013.

The median amount received by each claimant has remained at or near $\$ 100,000$ since 2005. Recoveries at the $90^{\text {th }}$ and $99^{\text {th }}$ percentiles have not exhibited any clear trends in recent years.

Indemnity Per Claimant - 90th Percentile

- The number of claimants with pending actions at the end of a year has declined substantially since 2005, reaching historic lows.

## Factors Impacting the Price of Medical Professional Liability Insurance

Many factors affect the cost of claims. Until recently, average payments have tended to rise significantly more rapidly than the overall rate of inflation. This report does not undertake a comprehensive, rigorous analysis of various cost factors. Past reports have highlighted inflationary pressures on claim costs. The economic component of indemnity payments consists primarily of lost wages and incurred medical costs, both of which have tended to increase more rapidly than the general rate of inflation.

No conclusions are presented in this report about possible future trends. Given the large annual fluctuations in average payments, several years of data are necessary to make credible future projections. Even with a sufficient time series, analyses are difficult when costs are impacted by moving and contrary forces. The difficulty is augmented by the significant changes that have occurred in Missouri's tort environment, such that prior trends may no longer be operative, and possible emerging new trends are too recent to provide a credible basis for projections. For example, several significant changes occurred with respect to the tort environment over the last decade. Prior to 2002, a single inflation-adjusted cap limited the amount each plaintiff could recover for non-economic damages in a medical liability action. In January of 2002, the Missouri Court of Appeals, Eastern District, ruled that the cap could be "stacked" across defendants (Scott vs. SSM Healthcare). In 2005, the legislature lowered the cap to a non-inflation-adjusted amount of $\$ 350,000$, and applied it to all defendants party to a single liability action. More recently, the Missouri Supreme Court ruled that the cap on non-economic damages was an unconstitutional infringement on the right to a jury trial (Watts vs. Cox).

## The Missouri Medical Malpractice Joint Underwriting Association (MMMJUA)

As a residual market mechanism, the Missouri Medical Malpractice Joint Underwriting Association (MMMJUA) was not created to compete with private insurance companies in the voluntary insurance market. Instead, the MMMJUA serves to provide access to individuals who are unable to secure insurance coverage in the voluntary market. It is what is commonly referred to as a "market of last resort" for insurance coverage.

Between August 2001 and May 2002, more than half of the carriers in the medical malpractice insurance market in Missouri - 57 percent - ceased writing medical malpractice insurance coverage. For all practical purposes, during this same period, only three insurance companies were accepting new business. Because of these market contractions, coverage for medical professionals was difficult to find and increasingly expensive.

In October, 2002, the Missouri Department of Insurance held a public hearing and received testimony from the insurance industry and medical providers regarding the market contraction. The Department subsequently issued a report in February, 2003 entitled, "Medical malpractice in Missouri - the current difficulties in perspective". In this report, the Department recommended the creation of a "workable, limited-scope joint underwriting association". The Department also noted that "a [joint underwriting association] is expected to have a rather short life span after which most of the state's insurers believe the hard market for pricing and availability should ease."

In July 2003, the Governor of Missouri requested that the Director of Insurance hold a public hearing to make a formal determination as to whether medical malpractice insurance was reasonably available in the state. On the basis of information presented at the hearing, the Director determined that coverage was not reasonably available. This determination allowed the Director to form a Joint Underwriting Association (JUA) for the purpose of providing medical malpractice insurance coverage to Missouri health care providers. The MMMJUA began issuing new policies of insurance effective June 2004.

The enabling state laws for the MMMJUA can be found in Chapter 383 - Sections 383.150 to 383.195 RSMo. All insurance companies reporting casualty insurance premium in the State of Missouri are members of the MMMJUA under state law. The MMMJUA is overseen by an eightmember Board of Directors appointed by the Director of the Department of Insurance and drawn from specified segments of the insurance industry as specified under Section 383.175 RSMo.

The MMMJUA is operated pursuant to a Plan of Operation which is subject to approval by the Director of the Department of Insurance. Rates are required to be actuarially sound and calculated to be self-supporting. In the event sufficient funds are not available for the sound financial operation of the MMMJUA, assessments may be made to member insurance companies. Those assessments may be deducted from past or future premium taxes due but not yet paid to the State.

## The Future of the MMMJUA

After commencing operations in June, 2004, the MMMJUA saw a rapid growth in size throughout its initial two years of operation. However, since 2006, there has been a dramatic and marked decrease in its size - both in terms of the number of policies issued and in written premium. The highest number of policies written through the MMMJUA was 71 policies written in 2006. Of those, the majority (59) were nursing home risks rather than physicians or other individual health care professionals. Conversely, in 2013, only 10 policies were issued of which eight were nursing home risks and only two were for physicians or other health care professionals.

The following chart provides a visual overview of activity in the MMMJUA, from its first full year of operation in 2005 through 2013.

There are potentially several reasons for the steep decline in activity in the MMMJUA. Arguably, the voluntary market for medical malpractice insurance is different than it was in 2003 or 2004. In 2003, the top five companies represented over $59.5 \%$ of the market in terms of written premium. The Department noted a significant market contraction in 2003, with several large and notable writers exiting the medical malpractice insurance market. In addition, a number of other companies non-renewed large portions of their books of business or filed significant rate increases. Complaints regarding both the availability and affordability of medical malpractice insurance were widespread.

Within the past several years, the Department has not received any complaints regarding the availability or affordability of medical malpractice insurance. The Department has also not received any notifications of significant market actions such as withdrawals or large non-renewal or cancellation activity. Comparing 2004 to 2013, the state has seen a slight increase in the number of insurance companies reporting written premium for medical malpractice insurance. There were 46 companies reporting written premium in 2004 while there were 51 companies in 2013. In terms of market share, the top five companies represented over $56 \%$ of the market's written premium in 2004. In 2013, the top five companies represented $45.84 \%$ of the state's written premium.

Competitive forces may also be placing downward pressure on rates, which obviously impacts the perception of affordability in the medical malpractice insurance market. While the Department is limited in the data it can review and analyze regarding rates and rate trends for medical malpractice insurance, it does collect information about annual written premiums. There has been a marked decrease in total written premium volumes since 2004. Total earned premium (including admitted and non-admitted markets) in 2004 totaled $\$ 243$ Million. Comparatively, the total earned premiums in 2013 (including admitted and non-admitted markets) totaled $\$ 157.5$ Million. During this same
time period, premiums through the non-admitted markets also decreased. In 2004, the nonadmitted market accounted for roughly $\$ 41$ Million in earned premium while in 2013, the nonadmitted market accounted for $\$ 31$ Million in earned premium. These figures all suggest the medical malpractice market is more competitive than it was in 2004.

Compounding the competitive forces which may be at work in the voluntary market, the MMMJUA operates within significant statutory limitations. Under current state law, the MMMJUA is limited in the amount of and types of coverage it can issue. The MMMJUA is restricted to writing coverage on an occurrence basis, rather than a claims-made basis. Claims-made based coverage is the most common type of coverage in the physicians and other health care professionals markets. Notably, there is also a statutory requirement for the MMMJUA to collect a surcharge from first year policyholders that is equal to the first years' premium.

While competition is positive for health care professionals seeking coverage in the voluntary market, the impact on the finances of the MMMJUA is not as positive. Of growing concern is the issue of administrative costs for the MMMJUA in relation to premiums. While premium volumes can fluctuate with the ebbs and flows of the market, there are certain fixed administrative expenses that are incurred, regardless of how many policies are issued. As a consequence, the ratio of expenses to premiums collected can appear imbalanced when premium volumes are low. In that regard, administrative costs for the MMMJUA in the last few years have exceeded written premiums. For the year ending 2013, the total administrative expense for the MMMJUA in 2013 totaled $\$ 485,000$. Of that total, the fixed management fees paid to the contractor totaled $\$ 335,000$. The remainder of the administrative expenses (roughly $\$ 150,000$ ) reflected routine underwriting and loss adjustment expenses that fluctuate with written business.

The statutory restrictions, the apparent low demand for coverage in the residual market and high administrative costs relative to the size of the JUA raise concern as to the continued viability of the MMMJUA. The Department is closely monitoring the operations of the MMMJUA and analyzing the medical malpractice market to determine if there is a continued need for this residual market mechanism.

Section 383.195 RSMo. provides that the termination of the MMMJUA shall be made by the Director following a public hearing at which it is determined that medical malpractice liability insurance is reasonably available to health care providers in the voluntary market.

## Nature and Substance of Allegations and Health Outcomes

Allegation and health outcome data are derived from the narrative of events alleged to have caused an injury that are submitted with each claim form. Narratives are coded according to taxonomies developed by the DIFP. Every effort was made to code each occurrence according to the most proximate cause of the alleged medical injury, rather than the actions of defendants whose involvement was less central. For example, if an individual received an unintentional cut during surgery, which subsequently led to an undiagnosed infection, the case would be coded as "cut, puncture or tear during surgery." To date, the DIFP has coded nearly 11,000 medical professional liability actions extending back to 2002, encompassing over 19,000 medical practitioners.

Following the categories of the National Practitioner Data Bank (NPDB), allegations are grouped into the following eight categories:

| Allegations by Category <br> 2002-2013 |  |  |
| :--- | ---: | ---: |
| Category of Alleged Medical |  | Paid |
| Error | Occurrences | Occurrences |
| Surgery | $31.5 \%$ | $30.5 \%$ |
| Non-Surgical Treatment | $18.0 \%$ | $17.5 \%$ |
| Diagnosis | $17.9 \%$ | $18.5 \%$ |
| Patient Safety / Ethical Issue | $13.8 \%$ | $14.1 \%$ |
| Medication | $9.1 \%$ | $8.8 \%$ |
| Pregnancy \& childbirth | $6.3 \%$ | $6.8 \%$ |
| IV \& Blood Products | $1.6 \%$ | $2.0 \%$ |
| Anesthesia | $1.6 \%$ | $1.6 \%$ |

Across all categories, just a few general types of allegations accounted for more than 85 percent of cases. Interestingly, injuries unrelated to medical treatment were among the largest sources of claims, with 1,000 claimants seeking compensation for falls on hospital grounds, assaults from medical staff or other patients, injuries during transport, among other causes. Over the period 2002-2013, insurers paid out $\$ 82$ million as a result of such claims. Pregnancy and birth-related claims accounted for 6.1 percent of all claims, but over $16 \%$ of total claim payments. Injuries sustained during surgery or non-surgical treatment account for a high volume of cases. Among this class of injuries, the most common was unintentional cut or tear during the procedure ( 985 cases). Additional types of injuries of this class include cardiovascular side-effects, such as heart attack, stroke, or embolism (576 cases), respiratory side-effect ( 158 cases), and an assortment of other types of less-defined injuries (716, classed as "Other injury during or as a result of procedure").

This category excludes other specific types of injuries, such as retained surgical materials (276 cases), and surgeries or other procedures performed on the wrong patient or the wrong body part ( 390 cases). Claims involving misdiagnoses and other diagnostic issues (excluding injuries incurred during a diagnostic test) accounted for 1,359 cases and $\$ 196.5$ million in payments.

The following tables include only the broadest classifications of alleged medical errors. Much more detailed tables are included in the body of the report.

| Most Common Types of Allegations Medical Professional Liability Closed Claims, 2002-2013 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Allegation Type | Claimants | Claimants <br> Receiving <br> Payment | Average <br> Payment | Average <br> Injury Severity <br> (1-9 <br> Scale) |
| All birth related injuries | 697 | 339 | \$713,592 | 6.5 |
| Physical injuries unrelated to medical procedure (falls, etc) | 974 | 602 | \$136,361 | 5.0 |
| Unintentional cut or tear during procedure | 985 | 495 | \$274,799 | 5.0 |
| Cardiovascular complication of procedure (heart attack, stroke, embolism, etc) | 576 | 288 | \$503,573 | 7.3 |
| Respiratory complication of procedure | 158 | 81 | \$519,101 | 7.6 |
| Other injury during procedure | 716 | 326 | \$173,244 | 4.3 |
| Surgical or other foreign body retained | 276 | 160 | \$111,251 | 3.9 |
| Pressure ulcers during care | 254 | 137 | \$160,178 | 6.3 |
| Acquired infection | 689 | 250 | \$341,441 | 5.3 |
| Wrong dose / wrong medication or substance employed | 554 | 375 | \$189,161 | 4.6 |
| Negative reaction to correct medication or substance | 588 | 150 | \$184,992 | 5.0 |
| Ethical problem, breach of regulation | 279 | 92 | \$55,688 | 1.9 |
| Procedure performed on wrong body part or wrong patient | 390 | 180 | \$208,514 | 4.5 |
| Post-operative bleeding or other problem with surgical wound | 228 | 106 | \$527,496 | 5.9 |
| Unnecessary or inefficacious procedure / lack of informed consent | 582 | 165 | \$184,653 | 4.6 |
| Delay in treatment / failure to respond | 436 | 191 | \$449,389 | 6.3 |
| All remaining diagnostic problems not included in a category above | 1,359 | 592 | \$332,050 | 6.2 |
| All Other | 1,752 | 601 | \$258,739 | 4.9 |

| Allegation Type | Total Paid | $\begin{array}{r} \% \text { of } \\ \text { Claimants } \end{array}$ | \% of <br> Claimants <br> Receiving Payment | \% of Total Payments |
| :---: | :---: | :---: | :---: | :---: |
| All birth related injuries | \$241,907,797 | 6.1\% | 6.6\% | 16.2\% |
| Physical injuries unrelated to medical procedure (falls, etc.) | \$82,089,430 | 8.5\% | 11.7\% | 5.5\% |
| Unintentional cut or tear during procedure | \$136,025,362 | 8.6\% | 9.6\% | 9.1\% |
| Cardiovascular complication of procedure (heart attack, stroke, embolism, etc.) | \$145,029,012 | 5.0\% | 5.6\% | 9.7\% |
| Respiratory complication of procedure | \$42,047,184 | 1.4\% | 1.6\% | 2.8\% |
| Other injury during procedure | \$56,477,583 | 6.2\% | 6.4\% | 3.8\% |
| Surgical or other foreign body retained | \$17,800,163 | 2.4\% | 3.1\% | 1.2\% |
| Pressure ulcers during care | \$21,944,420 | 2.2\% | 2.7\% | 1.5\% |
| Acquired infection | \$85,360,192 | 6.0\% | 4.9\% | 5.7\% |
| Wrong dose / wrong medication or substance employed | \$70,935,515 | 4.8\% | 7.3\% | 4.7\% |
| Negative reaction to correct medication or substance | \$27,748,734 | 5.1\% | 2.9\% | 1.9\% |
| Ethical problem, breach of regulation | \$5,123,279 | 2.4\% | 1.8\% | 0.3\% |
| Procedure performed on wrong body part or wrong patient | \$37,532,475 | 3.4\% | 3.5\% | 2.5\% |
| Post-operative bleeding or other problem with surgical wound | \$55,914,573 | 2.0\% | 2.1\% | 3.7\% |
| Unnecessary or inefficacious procedure / lack of informed consent | \$30,467,809 | 5.1\% | 3.2\% | 2.0\% |
| Delay in treatment / failure to respond | \$85,833,222 | 3.8\% | 3.7\% | 5.7\% |
| All remaining diagnostic problems not included in a category above | \$196,573,854 | 11.8\% | 11.5\% | 13.2\% |
| All Other | \$155,502,189 | 15.2\% | 11.7\% | 10.4\% |

Among all diagnostic-related cases (most of which involve misdiagnoses), most involved cancers of various forms ( 463 cases), of which the most common was breast cancer ( 103 cases). This category was followed by heart conditions ( 195 cases), digestive disorders ( 151 cases), fractures ( 148 cases), and strokes (113 cases) comprising the top 5 . Diagnosing a healthy patient with a condition was the $7^{\text {th }}$ most common diagnostic error, with 54 cases during the period.

| Diagnostic-Related Claims, 2002-2013 <br> By Medical Condition |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Infectious / Non-infectious Condition Indicator | Medical Condition | Claimants | Claimants <br> Receiving Payment | Average <br> Payment | Average Injury Severity (1-9 Scale) |
| NI | All Cancers | 463 | 209 | \$375,942 | 6.8 |
| NI | Heart Condition | 195 | 103 | \$401,562 | 7.9 |
| NI | Digestive disorders | 151 | 73 | \$335,672 | 6.0 |
| NI | Fractures | 148 | 47 | \$111,987 | 3.7 |

|  | Top 25 | 1,685 | 790 | \$406,996 | 6.4 |
|  | All Diagnostic | 1,989 | 932 | \$391,823 | 6.4 |

Additional tables display data on the most common initial conditions ultimately leading to a claim.

## Patient Outcomes

The final tables in Section VIII display data on health outcomes attributable to an alleged error. As would be expected, the most severe injuries are associated with the highest payouts. The following table includes all outcomes for which the average indemnity amount exceeded $\$ 500,000$. Almost all injuries in this category entail significant life-long impairment, such as significant neurological or spinal injury, loss of limb or organ function, or vision or hearing.

| Outcome | No. of <br> Claimants | Claimants <br> Receiving <br> Payment | Average <br> Payment | Average <br> Injury <br> Severity <br> (1-9 Scale) |
| :--- | ---: | ---: | ---: | ---: |
| Quadriplegia | 42 | 30 | $\$ 1,898,397$ | 8.0 |
| Cerebral palsy | 50 | 36 | $\$ 1,604,385$ | 7.7 |
| Contraction of meningitis | 11 | 1 | $\$ 1,600,000$ | 4.9 |
| Paraplegia | 92 | 55 | $\$ 1,137,133$ | 7.0 |
| Progression of meningitis | 8 | $\$ 1,080,600$ | 6.1 |  |
| Loss of hearing | 2 | 2 | $\$ 1,037,500$ | 6.0 |
| Other cognitive or neurological deficit | 454 | 229 | $\$ 930,621$ | 6.3 |
| Coma | 7 | 5 | $\$ 930,000$ | 5.6 |
| Full loss of vision | 41 | 23 | $\$ 809,376$ | 6.6 |
| Loss of organ | 24 | 14 | $\$ 706,310$ | 6.2 |
| Cauda equine syndrome | 13 | 9 | $\$ 634,169$ | 6.0 |
| Hemiplegia | 20 | 10 | $\$ 624,130$ | 6.9 |
| Amputation of hands/feet | 27 | 11 | $\$ 620,423$ | 5.6 |

Generally, average indemnity closely follows the severity of injury attributable to an alleged medical error. However, in interpreting average payments by injury severity, readers should recognize that cases departing from this pattern may be explicable by other factors. For example, economic damages, or compensation for monetary losses such as additional medical costs and lost wages, can vary considerably across cases that readers may believe are otherwise comparable. Nondebilitating cases, such as accidental sterilization or cosmetic issues, may entail little or no lost wages or additional medical expense. In these instances, economic damages would be minimal. Indemnity payments would primarily consist of compensation for non-economic injury (pain and suffering, diminished quality of life, loss of consortium, etc). On the other hand, awards for cases involving minimal physical injury can be substantially higher than might be expected. For example, a healthy person misdiagnosed with a terminal cancer would likely be traumatized, perhaps to the point of making life-altering decisions. Even though no physical injury has occurred (this case would be coded
" 1, " or the least severe category on the nine-point injury severity scale), both economic and noneconomic damages could be considerable.

Lastly, it is worth emphasizing that the allegation codes represent a claimant's version of events (as relayed to DIFP by an insurer). In some instances, events can be readily verified by an insurer. For example, concrete outcomes such as retained surgical material or operations on the wrong patient can be known with a high degree of certainty by all parties. However, fundamental facts of a case may be in dispute in many instances. Whether a patient contracted an infection while under care, or whether it was a pre-existing condition, may not be known with certainty by any of the parties involved in a dispute. Readers should exercise a degree of critical judgment when interpreting the data displayed in the allegation tables.

## Concepts and Definitions

Every attempt was made to make this report accessible to a broad readership. As such, technical terminology has been avoided where possible. However, readers should familiarize themselves with a few basic insurance terms.

## Premium Written vs. Premium Earned

Premium Written: The cost of coverage for the full policy term, reported as of December $31^{\text {st }}$ of the year in which a policy is issued, regardless of whether the policy term extends to future years. Written premium for a year includes premium adjustments, such as cancellations and changes in coverage, during the year for policies issued in the prior year.

Premium Earned: The dollar amount associated with the portion of the policy term that has elapsed by year-end.

The difference between written and earned premium can be better illustrated by example. Assume a one-year policy is issued on July 1, 2006, at a cost of $\$ 1,000$. At the end of the calendar year, the insurer will report $\$ 1,000$ of written premium on their financial annual statement. However, only half of the policy term will have elapsed at year-end. As such, only $\$ 500$, or one-half of the written premium amount, will be reported as earned premium. Earned premium is thus the amount of premium corresponding to the coverage actually offered during the year, since at yearend, half of the policy term will provide coverage in the future. For this reason, earned premium is the appropriate figure to use for assessing the performance of policy. For example, losses incurred during a reporting period correspond to elapsed coverage, and (obviously) not to coverage that will be extended at some future date.

## Paid Losses vs. Incurred Losses

Paid Losses: The amount of claims payments distributed during the year. In many instances, especially for "long tailed" lines such as medical professional liability, paid losses may correspond to claims that were first opened perhaps many years prior to the date of payment. They may also represent payments on structured settlements for claims closed in prior years.

Incurred Losses: Paid losses plus the change in loss reserves for the year. Reserves are insurers' expectations about how much will eventually be paid out on claims incurred during the year. This amount includes estimates about the eventual cost of pending claims. Incurred losses also include estimates of losses that have been incurred but not yet reported to the insurer (called "incurred but not reported," or IBNR). Lastly, incurred loss amounts may reflect adjustments to estimates from prior years, since the true cost of a claim will become clearer as time passes.

The amount of incurred losses is the measure of underwriting performance in a given year, since paid losses typically represent losses incurred in prior years. However, it is important to stress that incurred losses are estimates. The actual amount of total losses incurred during a year won't be known with certainty until many years in the future, when all pending claims are closed.

## Components of Profitability

Loss Ratio: The ratio of incurred losses to earned premium.
Loss adjustment expenses: Defense and cost containment expenses plus adjusting and other expenses. Loss adjustment costs are the most significant expense component for medical liability insurance, and in some years exceeds even the amount of indemnity going to claimants.

Other Expenses: Other expenses consist of sales costs, general business expenses, taxes and fees, and dividends.

Other Revenue and Expenses: This category includes revenue streams other than premium, losses and expenses, such as investment returns, taxes, and fees. Medical professional liability insurance is a "long tailed" line, meaning that premiums are collected perhaps many years before claims payments will be made. This time lag creates opportunities for significant investment gains, which in turn can partially offset the cost of coverage. Investment returns are thus a significant component of revenue for insurers.

Profitability: Insurers are required to annually file a financial statement. This statement contains a "state page," on which is reported claim costs and expenses directly tied to the operations in each state. However, some expenses and revenues, such a federal taxes and investment returns, are not intrinsically tied to state operations, and are reported as national aggregates. To assess true profitability in a state, national expenses and revenues must be allocated to a state in some nonarbitrary manner. The National Association of Insurance Commissioners (NAIC) has developed a widely-accepted profitability formula that performs these allocations. The NAIC figures through 2010 are reproduced in this report. The 2011 figure was calculated by the DIFP in accordance with the NAIC formula.

Claimants with Claims Reported: The number of claimants that have initiated a claim with insurers during a year, plus prior claims that are reopened. For claimants with multiple claims, the case is considered opened only for the year the initial claim is filed.

Claimants with Cases Closed: The number of cases brought to final settlement during the course of a year. A case is considered closed during the year that the final claim is concluded.

Claimants Receiving a Payment: For closed cases, the number of claimants that received and indemnity payment.

Claimants with Pending Actions: Total number of claimants with at least one claim unresolved at year end, regardless of when the claim was first reported.

Average Indemnity: The average amount paid either to claimants (total claim indemnity / total number of claimants) or the average paid on behalf of defendants (total indemnity / total number of defendants). Average indemnity amounts exclude loss adjustment expenses, such as legal and defense fees.

## Section I

## Historical Trends

This section contains graphs depicting trends in professional medical liability insurance for:

> All medical providers combined
> Claims involving at least one physician \& surgeon
> Claims involving at least one hospital

The tables and graphs are further categorized by:
Market Trends
Licensed and non-admitted premium
Analysis of carriers
Profitability
Historical premium and losses
Missouri loss ratios
Number of medical professional liability writers in Missouri
Frequency and Severity
Number of new claims reported to insurers
Average injury severity of new claims reported to insurers
Number of closed claims
Average injury severity of closed claims
Average indemnity of closed claims
Average loss adjustment expense of closed claims
Claim by county of jurisdiction

Claim Disposition
Number of months for paid claims form incident to disposition
Number of months by injury severity from incident to disposition

## Section II <br> Claim Severity

This section classifies individual claim data based on the amount of indemnity paid. The data for all medical providers, physicians \& Surgeons, and Hospitals are presented separately for the years 2011, 2012 and 2013. Summaries include:

Average number of months from incident to close
Number of claims reported and closed
Cumulative percentage of number of claims
Total indemnity paid
Cumulative percentage of indemnity paid for closed claims
Average economic damages
Average non-economic damages
Average indemnity
Average loss adjustment expense

The following terms are used in subsequent tables:

Economic damages: damages arising from monetary harm including medical bills, lost wages, and lost earning capacity.

Non-economic damages: damages arising from non-monetary harm, including mental anguish, inconvenience, physical impairment, disfigurement, loss of capacity to enjoy life and loss of consortium.

Loss adjustment expenses: expense paid to defense counsel and all other allocated loss adjustment expenses, such as filing fees, telephone charges, and fees for expert witnesses.

## Section III

Average Payments by Injury Severity And Lapsed Time to Disposition

This section illustrate the paid claim count, the average paid indemnity (economic + noneconomic), the percent change of paid claims, and the percent change of average paid indemnity by bodily injury severity for the past four years. These tables are displayed by the major business classifications and by the month from incident to disposition for all medical care providers, physicians and hospitals. Severity categories are defined as follows:

## Temporary Injuries (1-4)

1. Emotional only - fright, no physical damage. Examples include breach of patient confidentiality, misdiagnosing a healthy patient with a condition, inappropriate legal or ethical behavior.
2. Insignificant - Lacerations, minor contusions, rash. No delay in recovery.
3. Minor - Infections, misset facture, fall in hospital. Recovery is delayed.
4. Major -burns, surgical material retained, drug side-effect, temporary brain damage. Recovery delayed.

## Permanent Non-Fatal Injuries (5-8)

5. Minor - Loss of fingers, damage to internal organs. Injuries are non-disabling.
6. Significant - Deafness, loss of limb, loss or eye, one kidney or lung
7. Major - Paraplegia, blindness, loss of two limbs, significant brain damage
8. Grave - quadriplegia, severe brain damage, life-long care or fatal prognosis.

## Fatalities - 9

## Section IV <br> Indemnity Analysis by Company

Section IV contains the total number of claims reported to the insurer, total number of closed claims, the number of claims closed with payment, the total indemnity paid (economic + noneconomic), then total economic damage paid and the total non-economic damage paid by each company. Self-insured hospitals are reported in aggregate.

Each of the past three years is reported separately, and the companies are listed in descending order by the number of paid claims.

## Section V Indemnity Analysis by Professional Specialty

This exhibit contains the total number of claims reported to each insurers, total number of closed claims, the number of claims closed with payment, the total indemnity paid (economic + noneconomic), the total economic damage paid and the total non-economic damage paid for each medical specialty.

Data are ranked in descending order by the total number of paid claims.

Data presented in this section is based on each individual / entity with a payment made on their behalf. Data are not aggregated by incident, as in other sections. For example, if a single incident resulted in a payment by both a hospital and physician, each payment will be reported separately rather than added together.

## Section VI

## Claim Study by Means of Disposition

This sections presents claims data by means of disposition. Data are presented separately for cases involving hospitals, and physicians \& surgeons. Each table displays:

Number of closed cases
Percentage of claims by means of disposition
Average number of months from incident to report
Average number of months from incident to disposition
Average bodily injury severity
Average economic damage amounts per case
Average non-economic damage amounts per case
Average total indemnity per case
Average loss adjustment expense per case

| Means of Disposition, All Cases, 2013 |  |  |  |  |  |  |  |  |  |

## Section VII

## Analysis by Occurrence and Defendant

An occurrence represents an event or series of events that are alleged to have produced harm to a claimant. Previous reports presented data on the number of claims. A claim corresponds to a single policy against which a demand for damages has been made, or may otherwise be liable for payout. In fact, multiple claims may be associated with the same practitioner for the same incident. For example, a primary insurer may report a claim for a given insured. That same insured's excess carrier may report an additional claim if it also makes a payment over and above the liability assumed by the primary carrier. In addition, if an insurer closes and subsequently reopens a claim, two claims are counted in the DIFP database.

This report presents two alternative methods of aggregating the data, only recently available to DIFP's efforts to more effectively code the data. First, data are presented on a per defendant basis, such that a single practitioner is not counted more than once, regardless of the number of claims against that practitioner. Secondly, data are presented on a per occurrence basis, where an occurrence corresponds to a single injured party (or in rare cases, more than one injured party as in the case of a mother and child both injured during childbirth). A single occurrence may include multiple claims as well as multiple defendants. The table below illustrates the different methods of aggregating the DIFP claims data. See the executive summary for further discussion.

## Section VIII

## Nature and Substance of Allegations and Outcomes

Recently, the DIFP added a new data field derived from the "allegation codes" used by the National Practitioner Databank (NPDB). The allegation code is a rudimentary typology that captures information about the nature and substance of the alleged medical error or omission. However, this field has proven quite limited. In many instances, it captures information at such a high level of generality as to be nearly tautological. For example, a high percentage of claims were coded as improper performance, a description that conveys no additional information beyond the knowledge obtained from the mere fact that a claim has been filed.

As part of data enhancements, additional typologies were developed to capture more meaningful details about the nature of allegations of malpractice. As of 2011, over 15,000 records have been manually reviewed and allegation and outcome codes were derived from the written narratives that accompany each claim that is filed with the DIFP. In addition, new classifications were developed to capture greater information about the nature and severity of injuries than was captured by the traditional 9 -point injury severity scale. Basic tables derived from the recoded data are presented in this report.

Readers are cautioned that the figures presented in the following tables are not intended to be an absolute accounted of all types of errors. The number of occurrences will not reconcile with those presented in other sections of the report. This is because the data were produced prior to the due date for the filing on which the remainder of the report is based. In addition, some records had to be discarded due to missing or incomplete narratives. However, the numbers should provide readers with a good sense of typical allegations, as well as their relative (if not absolute) frequencies. The figures should be interpreted as an undercount of the true and (currently) unknown frequencies of various allegations.

## Section IX Premium and Loss Data by Company

This section contains the written premium, earned premium, paid losses, incurred losses, market share and loss ratio of all licensed medical malpractice writers in Missouri (i.e. excluding excess and surplus lines carriers). The data were derived from the Missouri Supplement to the Annual Statement. Data are presented for five market segments:

Physicians \& Surgeons
Hospitals
Dentists
Nurses
All Other

The reports are presented in descending order of market share by company. The data presented in this exhibit is independent from the claim data used in the preceding tables.
