# **Executive Summary**

#### **Data Sources**

This report is based upon data provided by insurers and self-insured hospitals to the Missouri Department of Insurance, Financial Institutions and Professional Registration (DIFP). These data include open and closed claims that insurance companies and self-insured hospitals are required to report under Section 383.105 RSMo. The DIFP makes every possible effort to make sure these data are accurate and complete. However, the accuracy of this report depends largely upon the accuracy of the data filed by insurers and self-insured hospitals.

Additional information is derived from the Missouri "supplement to the annual statement" (see <a href="http://insurance.mo.gov/reports/suppdata">http://insurance.mo.gov/reports/suppdata</a>). These data contain information about market segment, volume of business, market share, losses and expenses.

#### Format of Report

Historically, the DIFP data consisted of one record for each claim. In many instances, a single injury will produce multiple defendants. In addition, a single defendant may have multiple insurance coverages implicated in a single claim (for example, basic and excess policies), and each coverage counted as a single claim. For purposes of this report, all individual claims are aggregated for each plaintiff / injured party, as well as for each health care provider implicated in a liability action.

The scenario in the following table illustrates how a single legal action spawns 6 claims, even though there are only three defendants. As aggregation on a *per claimant* and a *per defendant* basis is much more meaningful than the traditional *per claim* aggregation, the latter has been dropped from the report. Individuals interested in the traditional claim counts should contact the department.

Comparison of Claimant, Defendant and Claim							
Claimant	Count	Defendants	Count	Claims	Count		
An individual brings a claim against a physician, a		Physician	1	Physician's primary carrier reports a claim	1		
radiologist, and a hospital, all of whom	1			Physician's excess carrier reports a claim	1		
are alleged to have contributed to a given injury or related injuries	1	Radiologist		Original claim against a radiologist is closed due to inactivity	1		
			1	The claim against the radiologist is subsequently reopened due to the filing of a lawsuit	1		
		Hospital		Hospital reports a claim against its self-insured funds	1		
			1	Hospital's excess carrier reports a claim	1		
Total	1		3		6		

#### Highlights

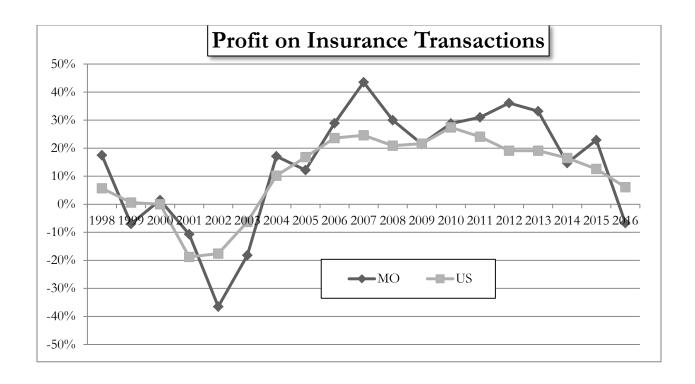

Data for physicians and surgeons, hospitals and other medical care providers are summarized in this report. The category of "other medical care providers" includes, but is not limited to, dentists, nurses, nursing homes, chiropractors, pharmacies, optometrists, podiatrists/chiropodists, clinics, and corporations.

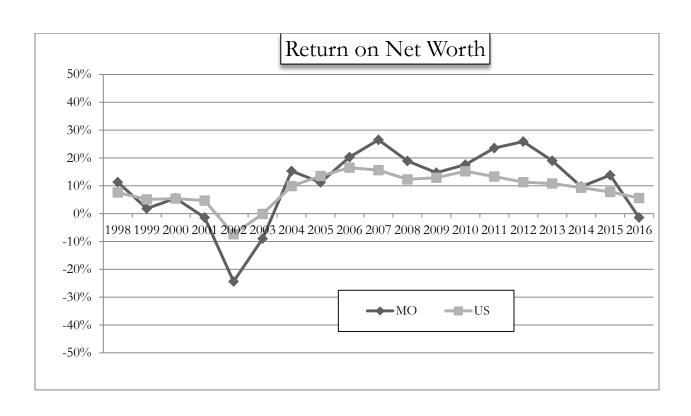

Among the findings of the report are:

■ **Profitability** Medical professional liability insurers returned a loss in Missouri for the first time since 2003. Claims incurred plus loss adjustment and administrative costs amounted to 123 percent of earned premium in 2016. Claims plus costs had also exceeded total premium during seven of the eight years preceding 2004 (see page 6). Nationally, profitability has also been trending downward in recent years.

Overall profitability for a line of insurance may be assessed by adjusting Missouri underwriting results to account for expenses and revenues that are not state or line specific, such as investment returns, various unallocated costs, and federal taxes. Estimates produced by DIFP, using the NAIC profitability formula, indicate a decline in profit from 14 to -1.4 percent of net worth between 2015 and 2016 (pages 6-7).

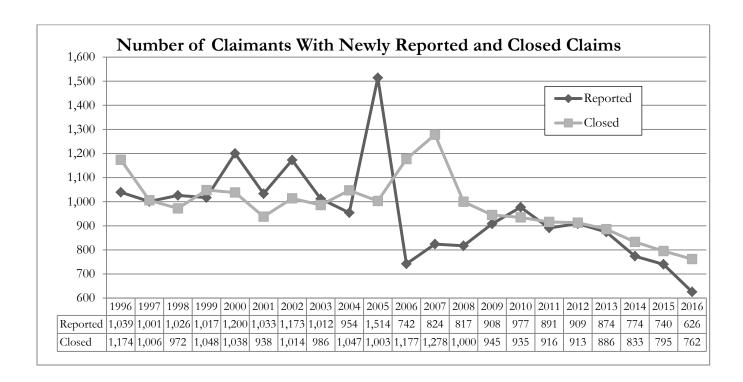

Incurred claims increased from \$26.5 million to \$93.0 million between 2015 and 2016. Defense and adjustment expenses related to settling claims, the largest expense component for medical professional liability insurance aside from claim payments, represent an additional 23 percent of premium (page 6).

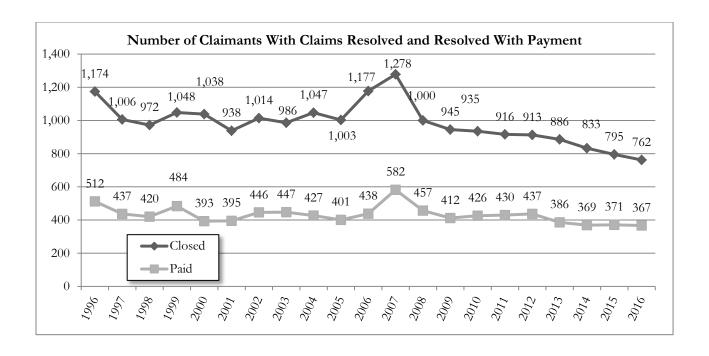

#### New Incidents Reported and Claims Closed

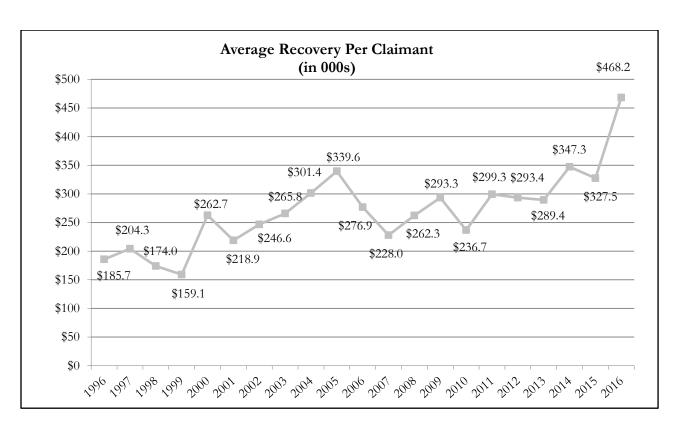

■ After new claims spiked sharply in 2005, newly-opened claims declined substantially in subsequent years. Aside from the anomalous 2005 spike in new claims (a direct result of legal changes implemented in that year), the number of claims reported has declined substantially in recent years, and by 2016 stood at 626.

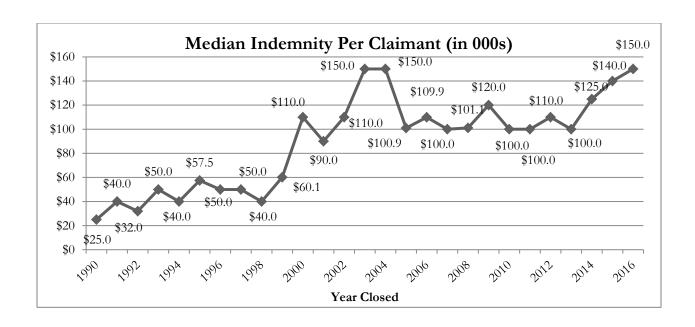

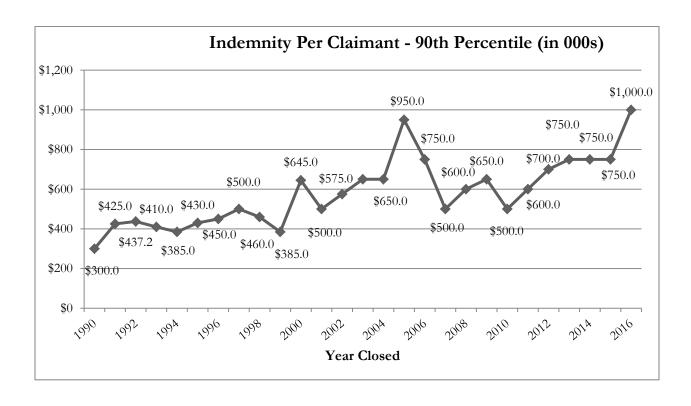

■ After a significant increase in 2007, the number of claimants receiving a recovery subsequently declined. However, the average award per claimant increased significantly between 2015 and 2016, rising from \$327,496 to \$469,228.

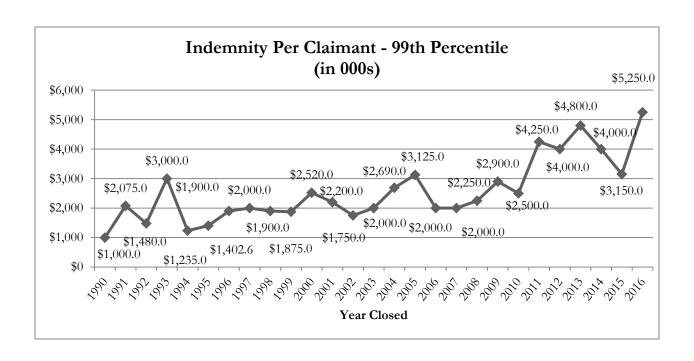

The median amount received by each claimant in 2016 stood at \$150,000, up slightly from prior years. Recoveries at the 90<sup>th</sup> and 99<sup>th</sup> percentiles also reached their highest point in the history of DIFP claims data (extending back to 1979).

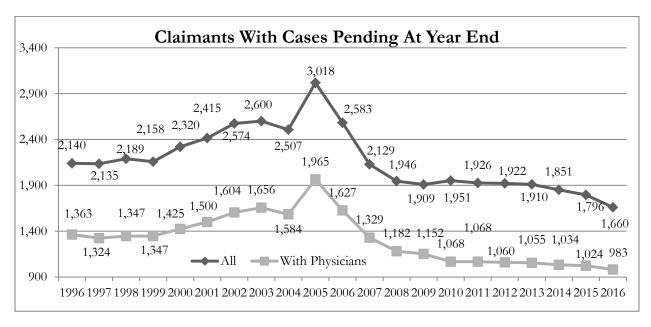

■ The number of claimants with pending actions at the end of a year has declined substantially since 2005, reaching historic lows.

#### Factors Impacting the Price of Medical Professional Liability Insurance

Many factors affect the cost of claims. Until recently, average payments have tended to rise significantly more rapidly than the overall rate of inflation. This report does not undertake a comprehensive, rigorous analysis of various cost factors. Past reports have highlighted inflationary pressures on claim costs. The economic component of indemnity payments consists primarily of lost wages and incurred medical costs, both of which have tended to increase more rapidly than the general rate of inflation.

No conclusions are presented in this report about possible future trends. Given the large annual fluctuations in average payments, several years of data are necessary to make credible future projections. Even with a sufficient time series, analyses are difficult when costs are impacted by moving and contrary forces. The difficulty is augmented by the significant changes that have occurred in Missouri's tort environment, such that prior trends may no longer be operative, and possible emerging new trends are too recent to provide a credible basis for projections. For example, several significant changes occurred with respect to the tort environment over the last decade. Prior to 2002, a single inflation-adjusted cap limited the amount each plaintiff could recover for non-economic damages in a medical liability action. In January of 2002, the Missouri Court of Appeals, Eastern District, ruled that the cap could be "stacked" across defendants or applied separately to each discrete act of malpractice from a single individual (Scott vs. SSM Healthcare). In 2005, the legislature lowered the cap to a non-inflation-adjusted amount of \$350,000, and applied it to total recovery from all defendants party to a single liability action. More recently, the Missouri Supreme Court ruled that the cap on non-economic damages was an unconstitutional infringement on the right to a jury trial (Watts vs. Cox). In 2015, the MO legislature enacted new caps. For more minor injuries, caps were set at \$400,000. Injuries defined as catastrophic were subject to a higher cap of \$700,000. Both caps are annually adjusted by a constant rate of 1.7 percent. For 2017, the caps stood at \$413,716 and \$724,002.

#### Nature and Substance of Allegations and Health Outcomes

Allegation and health outcome data are derived from the narrative of events alleged to have caused an injury that are submitted with each claim form. Narratives are coded according to taxonomies developed by the DIFP. Every effort was made to code each occurrence according to the most proximate cause of the alleged medical injury, rather than the actions of defendants whose involvement was less central. For example, if an individual received an unintentional cut during surgery, which subsequently led to an undiagnosed infection, the case would be coded as "cut, puncture or tear during surgery." To date, the DIFP has coded over 13,000 medical professional liability actions extending back to 2004.

Following the categories of the National Practitioner Data Bank (NPDB), allegations are grouped into the following eight categories:

Adverse Outcomes by Medical Category Closed Occurrences, 2004-2016 Percent							
Category of Alleged Medical Error	Occurrences	Paid Occurrences	% Total Payments				
Surgery	31.1%	29.9%	29.8%				
Non-surgical Treatment	19.7%	18.6%	15.2%				
Diagnosis	17.6%	18.0%	24.3%				
Patient Safety / Ethics	13.3%	14.5%	6.0%				
Medication	8.9%	8.8%	5.1%				
Pregnancy & childbirth	6.0%	6.6%	16.6%				
Anesthesia	1.8%	1.6%	1.9%				
IV & Blood Products	1.5%	1.9%	1.0%				
Total	100.0%	100.0%	100.0%				

Across all categories, just a few general types of allegations accounted for more than 85 percent of cases. Interestingly, injuries unrelated to medical treatment were among the largest sources of claims, with over 1,500 claimants seeking compensation for falls on hospital grounds, assaults from medical staff or other patients, and injuries during transport, among other causes. Over the period 2004-2016, insurers paid out \$126 million as a result of such claims. Pregnancy and birth-related claims accounted for 6 percent of all claims, but nearly 16 percent of total claim payments. Injuries sustained during surgery or non-surgical treatment also account for a high volume of cases. Among this class of injuries, the most common was *unintentional cut or tear* during the procedure (1,363 cases). Additional types of injuries of this class include cardiovascular side-effects, such as heart attack, stroke, or embolism; or respiratory side-effect (616 cases), and an assortment of other types of less-defined injuries (561, classed as "Other injury during or as a result of procedure").

This category excludes other specific types of injuries, such as retained surgical materials (316 cases), and surgeries or other procedures performed on the wrong patient or the wrong body part (140 cases). Claims involving misdiagnoses and other diagnostic issues (excluding physical injuries incurred during a diagnostic test) accounted for 2,412 cases and \$481 million in payments since 2004.

The following tables include only the broadest classifications of alleged medical errors. Much more detailed tables are included in the body of the report.

Allegation Categories						
Medical Professional Liab	ility Closed (	Claims, 2004-2	016			
Allegation Type	Claimants	Claimants Receiving	Average Payment	Average Injury		
		Payment		Severity (1-9 Scale)		
Diagnostic Errors	2,412	1,136	\$423,067	6.4		
Patient Safety (falls, facility elopement, etc.)	1,538	888	\$141,188	5.0		
Cut, puncture or tear during procedure	1,363	689	\$269,358	4.9		
Post-treatment infection	1,070	442	\$271,229	5.8		
Pregnancy & Childbirth	824	413	\$801,239	6.6		
Inefficacious treatment	723	257	\$225,033	4.8		
Adverse reaction to correct medication and dose	680	182	\$217,242	5.1		
Medication Error (wrong med, wrong dose)	648	464	\$202,360	4.5		
Cardiovascular / respiratory complication	616	300	\$516,146	7.2		
Improper use of equipment / equipment failure	575	258	\$247,100	4.7		
Other injury during or as a result of procedure	561	215	\$299,786	4.5		
Denial of care / patient abandonment*	421	48	\$348,614	3.6		
Foreign body retained	316	182	\$118,755	3.8		
Ethical / legal misconduct	270	105	\$85,625	1.2		
Non-administration of necessary care	206	92	\$314,534	6.3		
Informed consent / unnecessary procedure	196	66	\$243,996	4.3		
Other problem with surgical site	149	61	<b>\$474,35</b> 0	4.8		
Wrong patient / body part	140	101	\$216,844	4.4		
Delay in treatment	58	24	\$466,459	6.4		
Communication failure	58	14	\$239,464	5.9		
Inappropriate handling of biological material	51	42	\$162,749	5.4		
Unknown	1,077	354	\$238,292	4.9		

<sup>\*</sup>Many patient abandonment cases arise from the incarcerated population, and involve allegations of civil rights violations and deliberate denial of necessary medical care.

Among all diagnostic-related cases (most of which involve either misdiagnoses or failure to diagnose), most involved cancers of various forms (593 cases), of which the most common was breast cancer (127 cases). This category was followed by heart conditions (222 cases), fractures (179 cases), digestive disorder (176 cases) and strokes (154 cases) comprising the top 5. Diagnosing a healthy patient with a condition was the 7<sup>th</sup> most common diagnostic error, with 73 cases during the period.

Diagnostic-Related Claims, 2004-2016

By Medical Condition

Infectious / Non- infectious Condition Indicator	Medical Condition	Claimants	Claimants Receiving Payment	Average Payment	Average Injury Severity (1-9 Scale)

Additional tables display data on the most common initial conditions ultimately leading to a claim.

#### **Patient Outcomes**

The final tables in Section VIII display data on health outcomes attributable to an alleged error. As would be expected, the most severe injuries are associated with the highest payouts. The following table includes all outcomes for which the average indemnity amount exceeded \$500,000. Almost all injuries in this category entail significant life-long impairment, such as significant neurological or spinal injury, loss of limb or organ function, or loss of vision or hearing.

Medical Outcomes, 2004-2016								
With Average Payment > \$500,000								
Outcome	No. of	Claimants	Average	Average				
	Claimants	Receiving	Payment	Injury				
		Payment		Severity				
				(1-9 Scale)				
Quadriplegia	44	31	\$1,995,223	8.0				
Cerebral palsy	58	43	\$1,917,043	7.7				
Paraplegia	111	69	\$1,370,599	7.0				
Cognitive or neurological deficit	540	277	\$1,133,198	6.3				
Full - loss of vision	45	24	\$1,063,153	6.7				
Full - loss of hearing	2	2	\$1,037,500	6.0				
Progression - meningitis	11	7	\$1,025,429	6.1				
Progression - encephalitis	2	1	\$1,025,000	6.5				
Coma	10	5	\$930,000	5.7				
Hemiplegia	21	10	\$840,000	6.8				
Contraction - meningitis	12	2	\$840,000	4.9				
Perm - full loss of organ / organ function	27	17	\$725,993	7.6				
Stroke	121	61	\$719,683	6.1				
Perm - partial loss of organ / organ	279	86	\$604,735	5.3				
Cauda equine syndrome	16	10	\$588,252	5.9				
Amputation of two or more limbs	12	7	\$559,769	7.1				
Amputation of hands/feet	33	13	\$538,209	5.7				
Contraction of sepsis	50	25	\$524,688	7.5				
Amputation of one limb	155	84	\$522,056	6.1				

Generally, average indemnity closely follows the severity of injury attributable to an alleged medical error. However, in interpreting average payments by injury severity, readers should recognize that cases departing from this pattern may be explicable by other factors. For example, economic damages, or compensation for monetary losses such as additional medical costs and lost

wages, can vary considerably across cases that readers may believe are otherwise comparable. Non-debilitating cases, such as accidental sterilization or cosmetic issues, may entail little or no lost wages or additional medical expense. In these instances, economic damages would be minimal. Indemnity payments would primarily consist of compensation for non-economic injury (pain and suffering, diminished quality of life, loss of consortium, etc). On the other hand, awards for cases involving minimal physical injury can be substantially higher than might be expected. For example, a healthy person misdiagnosed with a terminal cancer would likely be traumatized, perhaps to the point of making life-altering decisions. Even though no *physical* injury has occurred (this case would be coded "1," or the least severe category on the nine-point injury severity scale), both economic and non-economic damages could be considerable.

Lastly, it is worth emphasizing that the allegation codes represent a claimant's version of events (as relayed to DIFP by an insurer). In some instances, events can be readily verified by an insurer. For example, concrete outcomes such as retained surgical material or operations on the wrong patient can be known with a high degree of certainty by all parties. However, fundamental facts of a case may be in dispute in many instances. Whether a patient contracted an infection while under care, or whether it was a pre-existing condition, may not be known with certainty by any of the parties involved in a dispute. Readers should exercise a degree of critical judgment when interpreting the data displayed in the allegation tables.

#### New to 2016 Report

The term "never event" was introduced in 2001 by the National Quality Forum (NQF). Categories of "never events" were later developed in conjunction with the Centers for Medicare and Medicaid Services (CMS). In general, such events are defined as unambiguous, readily quantifiable, and preventable. The occurrence of a never event is indicative of a lapse in expected standards of care or a failure of procedures. The list of never events was expanded in 2011, and includes serious events such as wrong site surgery, surgery on the wrong patient, medication errors, falls, and acts of self-harm among others.

In 2016, the DIFP began coding medial liability claims data according to never event criteria, based on the narratives submitted by insurers with each claim. Due to limitations of the data (as well as the medical expertise of DIFP analysists), such events are divided into "never events" when strict definitional criteria can be reasonably be assessed by the information provided, and "never event-type occurrences" when data are indeterminate with respect to such criteria, or when health outcomes do not meet the injury-severity thresholds required for a strict "never event." See Section VII for additional explanation.

% Never Event		13.2%	19.2%	14.0%		21.9%	30.3%	27.5%	

#### Other never events excluded:

- 1. Intraoperative /postoperative death in an American Society of Anesthesiologists Class 1 patient records are generally lacking in detail to determine class of patient. This event is therefore excluded entirely.
- 2. Care ordered by someone impersonating a health care provider there are no instances of this type of event in the medical liability records
- 3. Death or serious injury of a neonate in a low-risk pregnancy Since details of claims are almost always insufficient to identify a "low-risk pregnancy," all deaths or serious injuries are classed as "never event-type occurrences" rather than "never events."

#### **Concepts and Definitions**

Every attempt was made to make this report accessible to a broad readership. As such, technical terminology has been avoided where possible. However, readers should familiarize themselves with a few basic insurance terms.

#### Premium Written vs. Premium Earned

**Premium Written:** The cost of coverage for the full policy term, reported as of December 31<sup>st</sup> of the year in which a policy is issued, regardless of whether the policy term extends to future years. Written premium for a year includes premium adjustments, such as cancellations and changes in coverage, during the year for policies issued in the prior year.

**Premium Earned:** The dollar amount associated with the portion of the policy term that has elapsed by year-end.

The difference between written and earned premium can be better illustrated by example. Assume a one-year policy is issued on July 1, 2006, at a cost of \$1,000. At the end of the calendar year, the insurer will report \$1,000 of written premium on their financial annual statement. However, only half of the policy term will have elapsed at year-end. As such, only \$500, or one-half of the written premium amount, will be reported as earned premium. Earned premium is thus the amount of premium corresponding to the coverage actually offered during the year, since at year-end, half of the policy term will provide coverage in the future. For this reason, earned premium is the appropriate figure to use for assessing the performance of policy. For example, losses incurred during a reporting period correspond to elapsed coverage, and (obviously) not to coverage that will be extended at some future date.

#### Paid Losses vs. Incurred Losses

**Paid Losses:** The amount of claims payments distributed during the year. In many instances, especially for "long tailed" lines such as medical professional liability, paid losses may correspond to claims that were first opened perhaps many years prior to the date of payment. They may also represent payments on structured settlements for claims closed in prior years.

**Incurred Losses:** Paid losses plus the change in loss reserves for the year. Reserves are insurers' expectations about how much will eventually be paid out on pending claims. Incurred losses include estimates of losses that have been incurred but not yet reported to the insurer (called "incurred but not reported," or IBNR). Lastly, incurred loss amounts may reflect adjustments to estimates from prior years, since the true cost of a claim will become clearer as time passes.

The amount of **incurred losses** is the measure of underwriting performance in a given year, since paid losses typically represent losses incurred in prior years. However, it is important to stress

that **incurred losses** are *estimates*. The actual amount of total losses incurred during a year won't be known with certainty until many years in the future, when all pending claims are closed.

#### Components of Profitability

**Loss Ratio:** The ratio of incurred losses to earned premium.

Loss adjustment expenses: Defense and cost containment expenses plus adjusting and other expenses. Loss adjustment costs are the most significant expense component for medical liability insurance, and in some years exceeds even the amount of indemnity going to claimants.

**Other Expenses:** Other expenses consist of sales costs, general business expenses, taxes and fees, and dividends.

Other Revenue and Expenses: This category includes revenue streams other than premium, losses and expenses, such as investment returns, taxes, and fees. Medical professional liability insurance is a "long tailed" line, meaning that premiums are collected perhaps many years before claims payments will be made. This time lag creates opportunities for significant investment gains, which in turn can partially offset the cost of coverage. Investment returns are thus a significant component of revenue for insurers.

**Profitability:** Insurers are required to annually file a financial statement. This statement contains a "state page," on which is reported claim costs and expenses directly tied to the operations in each state. However, some expenses and revenues, such a federal taxes and investment returns, are not intrinsically tied to state operations, and are reported as national aggregates. To assess true profitability in a state, national expenses and revenues must be allocated to a state in some non-arbitrary manner. The National Association of Insurance Commissioners (NAIC) has developed a widely-accepted profitability formula that performs these allocations. The NAIC figures through 2010 are reproduced in this report. The 2011 figure was calculated by the DIFP in accordance with the NAIC formula.

Claimants with Claims Reported: The number of claimants that have initiated a claim with insurers during a year, plus prior claims that are reopened. For claimants with multiple claims, the case is considered opened only for the year the initial claim is filed.

**Claimants with Cases Closed:** The number of cases brought to final settlement during the course of a year. A case is considered closed during the year that the final claim is concluded.

Claimants Receiving a Payment: For closed cases, the number of claimants that received and indemnity payment.

Claimants with Pending Actions: Total number of claimants with at least one claim unresolved at year end, regardless of when the claim was first reported.

**Average Indemnity:** The average amount paid either to claimants (total claim indemnity / total number of claimants) or the average paid on behalf of defendants (total indemnity / total number of defendants). Average indemnity amounts exclude loss adjustment expenses, such as legal and defense fees.

### Section I Historical Trends

This section contains graphs depicting trends in professional medical liability insurance for:

All medical providers combined Claims involving at least one physician & surgeon Claims involving at least one hospital

The tables and graphs are further categorized by:

# Section II Claim Severity

This section classifies individual claim data based on the amount of indemnity paid. The data for all medical providers, physicians & Surgeons, and Hospitals are presented separately for the years 2011, 2012 and 2013. Summaries include:

Average number of months from incident to close
Number of claims reported and closed
Cumulative percentage of number of claims
Total indemnity paid
Cumulative percentage of indemnity paid for closed claims
Average economic damages
Average non-economic damages
Average indemnity
Average loss adjustment expense

The following terms are used in subsequent tables:

Economic damages: damages arising from monetary harm including medical bills, lost wages, and lost earning capacity.

Non-economic damages: damages arising from non-monetary harm, including mental anguish, inconvenience, physical impairment, disfigurement, loss of capacity to enjoy life and loss of consortium.

Loss adjustment expenses: expense paid to defense counsel and all other allocated loss adjustment expenses, such as filing fees, telephone charges, and fees for expert witnesses.

# **Section III**

# Average Payments by Injury Severity And Lapsed Time to Disposition

This section illustrate the paid claim count, the average paid indemnity (economic + non-economic), the percent change of paid claims, and the percent change of average paid indemnity by bodily injury severity for the past four years. These tables are displayed by the major business classifications and by the month from incident to disposition for all medical care providers, physicians and hospitals. Severity categories are defined as follows:

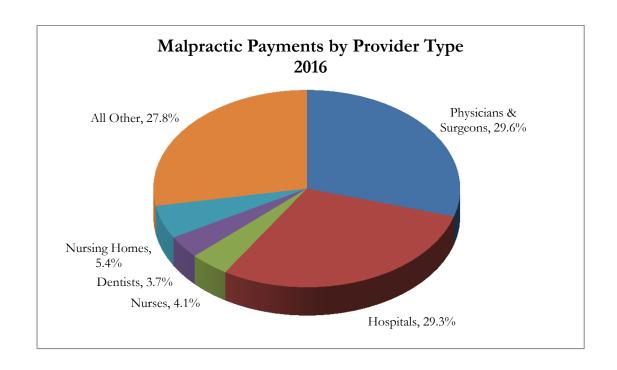

#### Temporary Injuries (1-4)

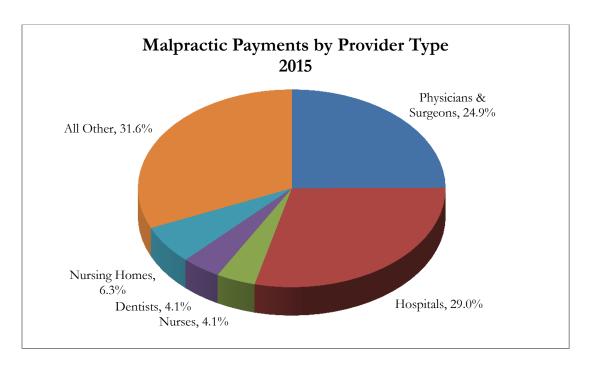

- 1. Emotional only fright, no physical damage. Examples include breach of patient confidentiality, misdiagnosing a healthy patient with a condition, inappropriate legal or ethical behavior.
- 2. Insignificant Lacerations, minor contusions, rash. No delay in recovery.
- 3. Minor Infections, misset facture, fall in hospital. Recovery is delayed.
- 4. Major –burns, surgical material retained, drug side-effect, temporary brain damage. Recovery delayed.

#### Permanent Non-Fatal Injuries (5 – 8)

- 5. Minor Loss of fingers, damage to internal organs. Injuries are non-disabling.
- 6. Significant Deafness, loss of limb, loss or eye, one kidney or lung
- 7. Major Paraplegia, blindness, loss of two limbs, significant brain damage
- 8. Grave quadriplegia, severe brain damage, life-long care or fatal prognosis.

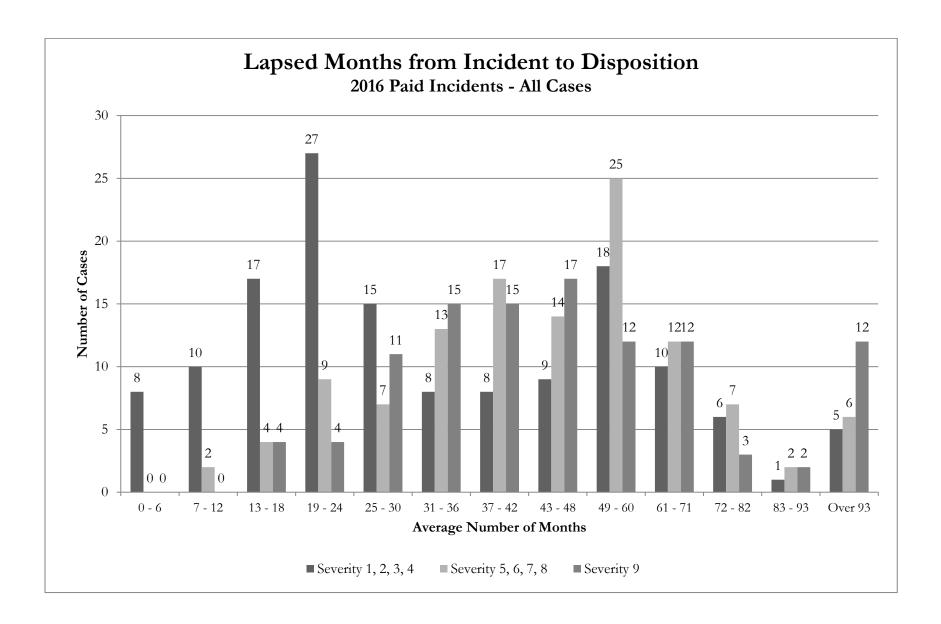

#### Fatalities – 9

# Section IV Indemnity Analysis by Company

Section IV contains the total number of claims reported to the insurer, total number of closed claims, the number of claims closed with payment, the total indemnity paid (economic + non-economic), then total economic damage paid and the total non-economic damage paid by each company. Self-insured hospitals are reported in aggregate.

Each of the past three years is reported separately, and the companies are listed in descending order by the number of paid claims.

# Section V Indemnity Analysis by Professional Specialty

This exhibit contains the total number of claims reported to each insurers, total number of closed claims, the number of claims closed with payment, the total indemnity paid (economic + non-economic), the total economic damage paid and the total non-economic damage paid for each medical specialty.

Data are ranked in descending order by the total number of paid claims.

Data presented in this section is based on each individual / entity with a payment made on their behalf. Data are not aggregated by incident, as in other sections. For example, if a single incident resulted in a payment by both a hospital and physician, each payment will be reported separately rather than added together.

## **Section VI**

# Claim Study by Means of Disposition

This sections presents claims data by means of disposition. Data are presented separately for cases involving hospitals, and physicians & surgeons. Each table displays:

Number of closed cases

Percentage of claims by means of disposition

Average number of months from incident to report

Average number of months from incident to disposition

Average bodily injury severity

Average economic damage amounts per case

Average non-economic damage amounts per case

Average total indemnity per case

Average loss adjustment expense per case

### **Section VII**

## Analysis by Occurrence and Defendant

An occurrence represents an event or series of events that are alleged to have produced harm to a claimant. Previous reports presented data on the number of claims. A claim corresponds to a single policy against which a demand for damages has been made, or may otherwise be liable for payout. In fact, multiple claims may be associated with the same practitioner for the same incident. For example, a primary insurer may report a claim for a given insured. That same insured's excess carrier may report an additional claim if it also makes a payment over and above the liability assumed by the primary carrier. In addition, if an insurer closes and subsequently reopens a claim, two claims are counted in the DIFP database.

This report presents two alternative methods of aggregating the data, only recently available to DIFP's efforts to more effectively code the data. First, data are presented on a *per defendant* basis, such that a single practitioner is not counted more than once, regardless of the number of claims against that practitioner. Secondly, data are presented on a *per occurrence* basis, where an occurrence corresponds to a single injured party (or in rare cases, more than one injured party as in the case of a mother and child both injured during childbirth). A single occurrence may include multiple claims as well as multiple defendants. The table below illustrates the different methods of aggregating the DIFP claims data. See the executive summary for further discussion.

#### **Section VIII**

### Nature and Substance of Allegations and Outcomes

Recently, the DIFP added a new data field derived from the "allegation codes" used by the National Practitioner Databank (NPDB). The allegation code is a rudimentary typology that captures information about the nature and substance of the alleged medical error or omission. However, this field has proven quite limited. In many instances, it captures information at such a high level of generality as to be nearly tautological. For example, a high percentage of claims were coded as *improper performance*, a description that conveys no additional information beyond the knowledge obtained from the mere fact that a claim has been filed.

As part of data enhancements, additional typologies were developed to capture more meaningful details about the nature of allegations of malpractice. To date, over 13,000 records have been manually reviewed and allegation and outcome codes were derived from the written narratives that accompany each claim that is filed with the DIFP. In addition, new classifications were developed to capture greater information about the nature and severity of injuries than was captured by the traditional 9-point injury severity scale. Basic tables derived from the recoded data are presented in this report.

Readers are cautioned that the figures presented in the following tables are not intended to be an absolute accounting of all types of errors. The number of occurrences will not reconcile with those presented in other sections of the report. This is because the data were produced prior to the due date for the filing on which the remainder of the report is based. In addition, some records had to be discarded due to missing or incomplete narratives. However, the numbers should provide readers with a good sense of typical allegations, as well as their relative (if not absolute) frequencies. The figures should be interpreted as an *undercount* of the true and (currently) unknown frequencies of various allegations.

Adverse Outcomes by Medical Category Closed Occurrences, 2004-2016

# **Section IX**

## Premium and Loss Data by Company

This section contains the written premium, earned premium, paid losses, incurred losses, market share and loss ratio of all licensed medical malpractice writers in Missouri (i.e. excluding excess and surplus lines carriers). The data were derived from the Missouri Supplement to the Annual Statement. Data are presented for five market segments:

Physicians & Surgeons

Hospitals

Dentists

Nurses

All Other

The reports are presented in descending order of market share by company. The data presented in this exhibit is independent from the claim data used in the preceding tables.
