Introduction

This report makes use of diverse data sources to provide an overview of Missouri's health insurance market. In addition to data possessed by the Department of Commerce and Insurance (DCI), additional sources include the Current Population Survey (CPS), the American Community Survey (ACS), and other key indicators available from the US government.

The focus of this report is on *major medical coverage* – a term traditionally used for comprehensive or broad-based coverage for most necessary care. Many other types of coverage exist in the market, including many policies that offer limited benefits for specified conditions or injuries, including dental and vision, specified disease, hospital indemnity, long-term care and Medicare supplement policies. In addition, other types of insurance, such as automobile insurance and workers compensation, can also cover medical expenses. Unless otherwise indicated, the term *health insurance* refers to *major medical coverage* throughout this report.

Among the highlights:

In 2018, the percent of Missourians lacking health insurance reached record lows. The uninsured rate declined from a high of 15.3 percent in 2009 to 6.0 percent in 2018. The uninsured rate increased in each of the subsequent three year, and reached 9.7 percent in 2020, but declined to 7.55 in 2021. These measures represent the most chronically uninsured – those who lacked coverage for the entire year. The percent of those who lacked coverage for part of the year experienced similar increases over the same time period, reaching 10% in 2019. In 2021, this figure declined slightly 50 9.5% in 2021¹

Over three-quarters of Missourians aged 18 to 64 obtained coverage from the private market some point during 2021, while about 14% were covered by either Medicare or Medicaid or both. Of those with private coverage, a significant number obtained coverage from employer self-insured plans, which are regulated by the federal government. Thirty-two percent of private coverage was provided by third-party insurers regulated by the Department of Commerce and Insurance.

The percent of uninsured individuals varied significantly across Missouri. Typically, higher rates are observed in more rural and sparsely populated counties.

The cost of coverage has increased significantly since 2011, though rate filings indicate much more modest change for plans that will be sold in 2022. Since 2011, the annual cost of coverage per individual has increased by an estimated 241 percent to \$7,115 in 2022 in the individual market.² The cost of coverage in the large employer market (or employers with 50 or more employees) increased much less rapidly, and even decreased during two of the last seven years. Between 2011 and 2021, average annual cost cost per insured increased by a modest 26 percent. Data for this class of business

¹ This measure is from the American Community Survey (ACS). Due to the pandemic, data collection for the ACS was interrupted and data were unavailable for 2020.

² That is, the market wherein individuals purchase coverage directly from an insurer, as opposed to obtaining coverage via an employer.

is not available for 2022 because rates for large employer coverage are not filed with the department, and data from insurers' financial statements are only available through 2021.

Missouri's health insurance market (for major medical policies) is significantly more concentrated than other insurance markets in the state. Across all three major medical markets – individual, small and large employer – the largest four insurers controlled 90 percent or more of the state-wide market. Though data are generally lacking, markets are even more concentrated in some regions of the state since not all insurers operate in all areas of the state.

Between 2012 and 2021 Missouri citizens and businesses received \$482 million in rebates from health insurers that did not meet the minimum loss ratio (MLR) requirements of the federal ACA. The ACA requires insurers in the individual and small employer markets to spend a minimum of 80 percent of every premium dollar directly on health care or for improvements in quality of care. Insurers of large employers are required to spend 85 percent of premiums on these services. The 2020 rebate totaling \$193 million is nearly three times greater the second highest on record for Missouri. Rebates totalled a more modest \$49 million in 2021.

Insurers lost money in the individual market during six years from 2010 to 2021, though overall remained strongly profitable every year across all lines of coverage, save 2021. In addition, the individual market returned a significant profit in from 2017 to 2020, though experienced significant losses of \$167 million in 2021. Insurers earned additional revenue from such sources as investment gains as well as administering self-insured plans. In 2021, insurers with more than \$100,000 in major medical premium in Missouri earned a net gain on Missouri business of just over \$265 million.

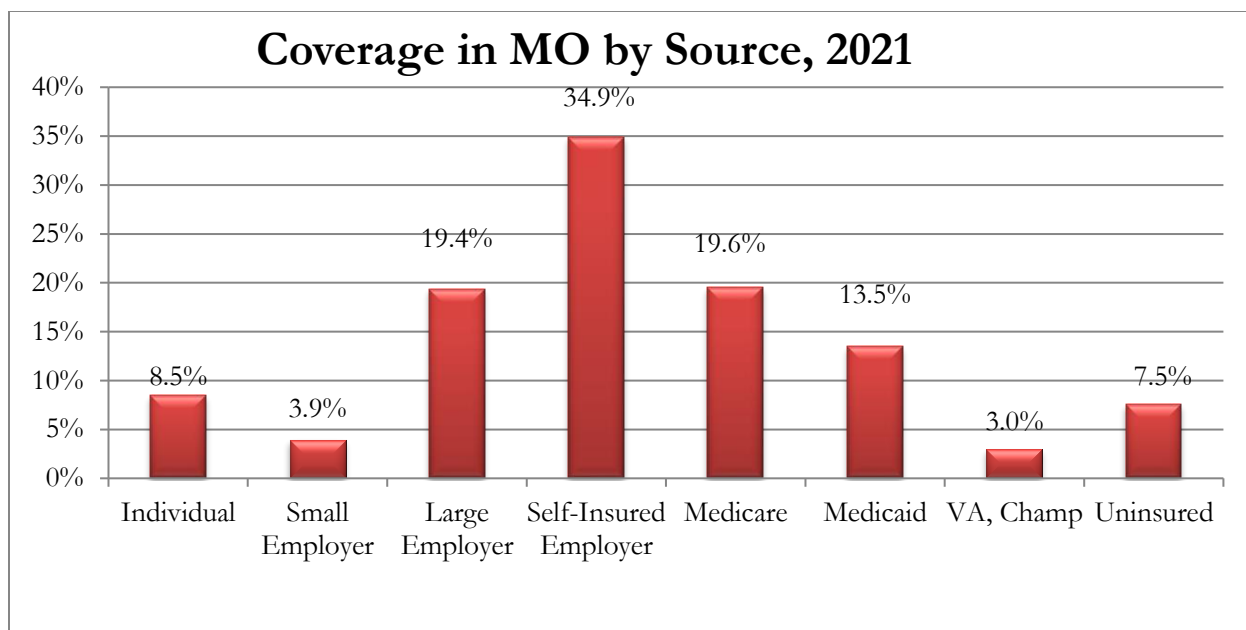

Section I: Source of Coverage

Just over one-third of Missouri residents had coverage from at least one public program, while nearly 65 percent were insured by private or commercial coverage at some point in 2021. Among those with private coverage, the large majority received coverage through an employer, and the majority of employers providing coverage were self-insured. Self-insured plans are regulated at the federal level under the Employee Retirement Income Security Act (ERISA), such that state insurance departments lack jurisdiction over such plans. About one-third of Missouri residents obtained coverage from third-party insurers regulated by the state insurance department.

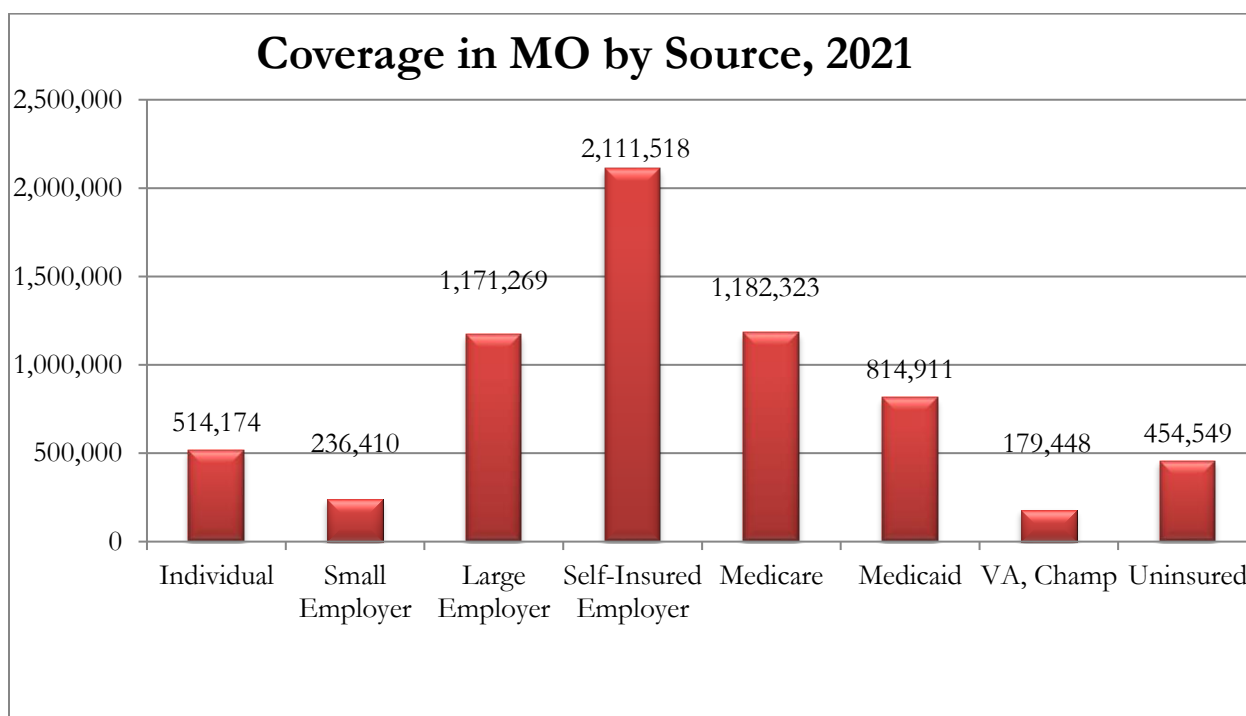

The percent of individuals in MO without insurance declined rapidly between 2013 and 2018, but the downward trend was reversed in 2019. Individuals lacking coverage for the entirety of 2019 comprised 8.5 percent of residents, up from 6.0 percent in 2018. Uninsured rates increased again in 2020 to 9.7 percent, but decreased to 7.5 percent in 2021. Slightly less than ten percent did not have insurance coverage on any given “average day” during 2021. For Missourians of working-age (aged 18-64), 10.1 percent lacked coverage for all of 2021. This compares with 11.5 percent nationally.

In 2018, Missouri had a lower percentage of uninsured residents than 31 other states. However, this ranking subsequently deteriorated such that in 2021 Missouri only had a lower rate than 20 other states. Texas had the highest uninsured rate among the state (16.7%), while Vermont had the lowest (2.8%).

Rural counties tended to have higher uninsured rates than elsewhere in the state in 2019 (latest data available). Fifty counties had uninsured rates exceeding 15 percent, with the highest insured rates in Barry, Daviess, Hickory, Knox, McDonald, Morgan, Ozark, Scotland, and Wright.

**Numbers can exceed 100 percent because individuals can have more than one source of coverage.*

**Totals may exceed the Missouri population because individuals can have more than one source of coverage. These numbers will differ significantly from similar estimates made from insurers financial annual statements presented below (page 17). These graphs depict individuals who had coverage at any time during 2019, while the annual statements report the number insureds on 12/31. In addition, the numbers will differ somewhat from those taken directly from the CPS, as the CPS estimates are adjusted by the DCI to reflect additional data sources. The raw CPS estimates are also presented below.*

Source: Estimates produced by DCI, combining insurer financial annual statements and the Current Population Survey (CPS). Due to the pandemic, the American Community Survey (ACS) could not be available, so the 2020 methodology differs somewhat from prior reports.

MO Uninsured		
Year	ACS	CPS
2009	13.2%	15.3%
2010	13.2%	14.0%
2011	13.7%	14.9%
2012	13.6%	13.3%
2013	13.0%	10.5%*
2014	11.7%	8.8%
2015	9.8%	8.8%
2016	8.9%	8.3%
2017	9.1%	8.4%
2018	9.4%	6.0%
2019	10.0%	8.5%
2020	*	9.7%
2021	9.4%	7.5%

Sources: The American Community Survey (ACS) and the Current Population Survey (CPS). The ACS is a “point-in-time” measure of the uninsured, so that estimates reflect the percentage of uninsured on the day of the survey. The CPS attempts to measure uninsured as those who lacked insurance for the entire year.

*The CPS introduced revised question wording in 2013 that had a significant impact on the estimates. Because of this, prior estimates are not directly comparable to the estimates for 2013 and later years.

*Due to the pandemic, data collection for the ACS was interrupted and was not available for 2020.

Source: Small Area Health Estimates (SAHIE), Bureau of the Census. Latest data available, published by the Bureau of the Census in April, 2021.

Section II: Health Care Spending

The cost of coverage has increased substantially in the individual and small employer markets since 2011. For those obtaining coverage in the individual market, the cost to insure a single individual for a year averaged \$2,099 in 2011. Rates filed in 2020 and effective in 2021 indicate that costs will increase to \$7,031, or by 278 percent over 2011 costs. Rates in the small employer market increased by 93.0 percent over the same time period, from \$3,900 to \$7,520.

The Consumer Price Index for health care, which measures the cost of a “fixed basket” of goods and services, increased by 195 percent between 1990 and 2020, compared to 81.8 percent for overall CPI.³

³ Based on the CPI for St. Louis. The CPI is produced for major urban areas only.

Average Annual Cost of Coverage per Insured Missouri

*The CPI is produced for major urban areas. Therefore, there is no "Missouri CPI."

** The BLS revised the geography of the CPI in 2018. Kansas City was not selected for this revision, and no data for Kansas City will be available for 2018 and subsequent years.

Section III: The Commercial Market & the Federal Marketplace

According to insurers financial annual statements, 965,466 Missourians were insured in the commercial market as of December 31, 2020. The majority were insured in the large employer market consisting of employers with 50 or more employees. The remainder were split between small employers (138,039) and the individual market in which insureds purchase coverage on their own (217,300).

As of early 2021, 215,311 individuals were enrolled in the Federally Facilitated Marketplace (FFM). The large majority of these individuals received subsidies in the form of the advanced premium tax credit (APTC) or cost sharing reductions (CSR) which lower the amount of out-of-pocket expenses covered individuals pay. The average monthly premium in 2020 was \$639, but for individuals eligible for the APTC the average monthly cost fell to \$102. Approximately 84% of enrollees were eligible for an APTC.

Missouri Insureds at Year-End (Excluding Self-Insured Plans) Data from the Financial Annual Statement

Section V: Market Competitiveness

Missouri health insurance market for comprehensive or ACA compliant coverage is highly concentrated compared to other lines of insurance. Within each market – individual, small and large employer – the top four insurers control over 90 percent of the market based on premium. A commonly used measure of market concentration is the Herfindahl-Hirschman Index (HHI). The HHI is calculated as the sum of the squared market shares of all groups. This index generally ranges from 0, representing a highly competitive and fragmented market, to 10,000, representing a line of business dominated by a single firm. While the index values have no intrinsic meaning, the anti-Trust Division of the Department of Justice provides one commonly used guideline:

- A. Below 1,000: Unconcentrated or competitive
- B. 1,000 to 1,800: Moderately concentrated
- C. Over 1,800: Highly concentrated

Each of Missouri’s commercial health insurance markets is considered “highly concentrated” by this measure. In addition, the statewide concentration measures may understate the more significant lack of competition in some areas of the state, since not all insurers operate statewide. Other lines of insurance are provided for comparison.

Market Concentration Indices, 2021

Other Health Products

In addition to comprehensive health plans (i.e. ACA compliant plans), there is a sizable market for products that offer ancillary or more limited coverages. These products range from stand-alone dental or vision plans, Medicare supplement and long term care coverage, or policies that cover only specific conditions or causes of injury, such as cancer only policies or accident only policies. All products combined exceeded \$17.2 billion in Missouri premium in 2019.

Section VI: Rebates & Profitability

The Affordable Care Act established a minimum medical loss ratio (MLR) requirement for ACA plans. Under the MLR provision, individual and small employer coverage must spend at least 80 percent of premium dollars on claims plus quality of care efforts. For large employers, the MLR is 85 percent. Insurers that fail to achieve MLR requirements must rebate the difference between the requirement and actual loss ratios to consumers. Since 2012, Missouri residents and businesses have received \$433.1 million in the form of rebates on their premium. The rebate for 2020 was more than three times the second greatest rebate amount. For the small employer market, Missouri has ranked in the top 4 states in seven of the prior nine years as measured by rebate per insured, and ranked #1 in two of those years. Additional revenue and expense items are detailed in the following tables.

Medical Loss Ratio Rebate in Missouri						
By Year in Which Rebates are Calculated and Distributed						
		State Rank of Rebate per Enrollee (\$ Rebate / # of Insureds Receiving Rebate) (High to Low)				
Year	Total Rebate	Ind.	Small Employer	Large Employer	Total Rebate	Rank by Total Rebate Dollar Amount
2012	\$60,664,564	7	1	19	2	6
2013	\$19,186,415	18	4	7	11	7
2014	\$14,609,316	19	1	33	11	4
2015	\$13,598,380	38	2	27	12	11
2016	\$20,912,407	9	3	21	8	6
2017	\$13,767,411	18	3	31	10	10
2018	\$45,538,433	4	4	33	4	5
2019	\$52,067,788	8	6	28	13	10
2020	\$192,765,759	1	5	35	2	3
2021	\$49,284,308	17	5	36	13	13
Total		\$482,394,781

Insurers offering major medical coverage experienced a loss from their core insurance operations in five of the last ten years in the individual market.⁴ However, the individual market returned strong positive returns through 2017 to 2020. The small and large employer markets have experienced positive returns throughout the period between 2011 and 2020, though the large employer market experienced a loss in 2018 – the first time over the time period.

*Excludes taxes, investment income and other revenue such as income from administering self-insured plans.

Source: Insurers' annual financial statements, Supplemental Health Care Exhibit, Part 1, line 11.

⁴ That is, losses were experience on underwriting operations, consisting primarily of premium revenue, claims experience and other expenses related to insurance operations. This amount excludes other revenue such as investment income and income for administrative operations, as well as taxes.

Beyond underwriting-related gains and losses, insurers also receive significant revenue streams in the form of investment income and other operations such as administering self-insured health plans. Combining all sources of revenue and losses, insurers writing major medical coverage in Missouri experienced a net return exceeding \$400 million on Missouri business every year since 2016.

Section VII: Complaints

Between 2018 and 2020 the DCI received 1,798 complaints from consumers about their health insurance coverage. The majority of these complaints, or 1,206, pertained to the way that an insurer handled a claim, and were most often related to claim denials or delays in processing a claim. As a result of these complaints, consumers received recoveries (i.e. payment on denied claims, etc.) totaling \$9.4 million.
